**Subject: First Round of Commissioning for Community Within the Corridor – East Block
2748 N. 32nd Street, Milwaukee, WI 53208
BRRTS #: 02-41-263675, FID #: 241025400**

Dear Mrs. Meyer:

On behalf of the Community Within the Corridor Limited Partnership, K. Singh & Associates, Inc. (KSingh) is pleased to submit the results of the first round of Commissioning of the Vapor Mitigation System for the Community Within the Corridor – East Block project. Commissioning was performed in accordance with the Commissioning Plan that was submitted to the Wisconsin Department of Natural Resources (WDNR) on December 23, 2022 and updated on February 8, 2023.

Passive Indoor Air Sampling

Passive air sampling was performed in accordance with the approved Commissioning Plan. The locations of the relevant buildings in relation to the project area are shown in Figure 1. A total of eighty-one samples kits were deployed on 2/20/2023 through 2/21/2023 in the East Block facility, including one outdoor air sample which was collected for background monitoring. Passive air samplers were deployed for a period of one week and were collected from 2/28/2023 through 3/1/2023. Upon retrieval, one sample kit (EB-03-P) was missing. In addition, two sample locations (EB-02-A and EB-01-A) were unable to be accessed. The locations of the passive air samplers are included in Figure 1.

The passive air samplers were submitted to Eurofins Air Toxics, LLC Folsom, CA for analysis for chlorinated solvents including Trichloroethylene (TCE), Tetrachloroethylene (PCE), cis-1,2-Dichloroethylene (cis-DCE), and trans-1,2-Dichloroethylene (trans-DCE). The results are included in Attachment A and summarized in Table 1.

TCE was reported in nineteen (19) samples (EB-01-B, EB-01-J, EB-01-N, EB-01-O, EB-01-P, EB-01-X, EB-01-Y, EB-01-Z, EB-01-AA, EB-01-AB, EB-01-AC, EB-01-AD, EB-01-AE, EB-01-AF, EB-01-AH, EB-02-N, EB-02-P, EB-02-X, and EB-03-M) in exceedance of the Residential Indoor Air Vapor Action Level (VAL) of 2.1 ug/m³ based on the February 2022 Quick Look-Up Table from the WDNR. The maximum concentration of TCE detected in indoor air was 400 ug/m³. A total of fifteen exceedances were located on the first floor of the facility, with three (3) additional exceedances located on the second floor, and one (1) exceedance located on the third floor. Vapor exceedance plumes on each floor are located in the same portion of the facility (Building 1B-SW and 1B-W) indicating that cracks in the building foundation are allowing for the intrusion of sub-slab vapors into the building.

Sub-slab Depressurization System Vacuum Measurements

The sub-slab depressurization system installed CWC – East Block was tested between March 7, 2023 through March 14, 2023. A handheld hammer drill was used to install vapor pins beneath the slab of the structure. A digital manometer was utilized to take measurements of vacuum below the slab after the vapor points passed a water dam test. Forty-three (43) locations were chosen to take measurements to get an accurate model of sub-slab depressurization from each suction point. The building slab was unable to be penetrated at VP-12 and VP-14. VP-12 was moved north out of the tunnel connecting buildings 1B-NW and 2A. VP-13 was incrementally moved to the west, however, was still not able to penetrate the building slab.

In accordance with a vapor mitigation system commissioning plan submitted by KSingh on February 8, 2023, a reading of 0.004 inches water was utilized to determine whether the system was adequately operating. Recorded measurements range from 0.000 to 0.310 inches of water. A total of fourteen locations did not meet the system requirements, primarily in the southwestern portion of the facility.

The locations and results of March 2023 sub-slab depressurization measurements are depicted on Figure 2 and summarized in Table 2. The greatest vacuum measurements are observed in buildings 3A and 1B-SE. Locations of vacuum readings that did not meet the requirements outlined in the Commissioning Plan include the southern wall of building 2A, the eastern wall of building 1B-NE, southwestern wall of building 1B-NW, the northern wall of building 1B-W, and building 1B-SW. The locations of the lowest vacuum readings align with the locations of the highest TCE concentrations measured during passive indoor air sampling.

Exhaust Sampling

Two blowers were installed on the property as part of the vapor mitigation system, one in the basement of building 3A and one outside to the north of building 1B-SE. As part of commissioning, 1.4L Summa canisters provided by Synergy Environmental Lab, Inc. (Synergy) were utilized to gather air quality data from the two exhaust points on March 16, 2023. Samples were gathered for fifteen minutes via vapor lines extended into the fan system while the fans were operating. System tightness was confirmed with shut in testing, and sample lines were purged between each sample. Upon completion of sampling, cannisters were submitted to Synergy for analysis of TO-15 parameters.

Test results are included in Attachment B. Results from Synergy document concentrations of PCE and TCE in exhaust samples. PCE and TCE concentrations in exhaust samples are less than the Residential Indoor Air VAL. Based on the concentrations of PCE and TCE in the exhaust, some mass reduction is taking place in the sub-slab.

The results of the March 2023 exhaust fan air quality sampling are summarized in Table 3 and the locations of sampled fans are included on Figure 2.

Remedial Actions Taken

The WDNR were notified of exceedances of the VAL of 2.1 ug/m³ for TCE in nineteen locations in March 2023. The locations were samples EB-01-B, EB-01-J, EB-01-N, EB-01-O, EB-01-P, EB-01-X, EB-01-

Y, EB-01-Z, EB-01-AA, EB-01-AB, EB-01-AC, EB-01-AD, EB-01-AE, EB-01-AF, EB-01-AH, EB-02-N, EB-02-P, EB-02-X, and EB-03-M with maximum concentration of 400 ug/m³. Test results were sent to the WDNR on March 23, 2023. Residents were notified of the exceedances and evacuated from the property on March 29, 2023.

Conclusions

The following conclusions were reached based on the sampling.

- Based on the results of sub-slab vacuum measurements, the vapor mitigation system installed on the subject site adequately creates vacuum beneath the building slab for buildings 1B-SE, 1B-S, 1C, 2B, and 3A.
- Portions of buildings 2A, 1B-NE, 1B-NW, 1B-W, and 1B-SW did not meet the requirement of 0.004 inches of water.
- Passive indoor air results show that TCE exceeded its VAL at nineteen (19) sample locations, primarily in buildings 1B-W and 1B-SW.
- Fan emissions sampling indicates that PCE and TCE are still present in the sub-slab and that mass reduction is taking place.
- Based on the results from the first round of commissioning, the sub-slab depressurization system is not operating as intended.

Recommendations

The following recommendations are made based on the conclusions reached:

- Permanent exhaust points should be installed on the roof of the East Block property at least a foot above the roofline.
- Due to exceedances of the indoor air testing, additional action will be needed, including continued monitoring of locations which exceeded their VALs.
- The VMS system should be monitored in order to ensure that adequate vacuum is being created beneath the entire building footprint.
- Access points for the operation and maintenance of the vacuum system should be constructed.
- It is recommended to install blowers with a higher capacity for better depressurization of the sub-slab environment.

Please contact us if you have any questions or seek clarification regarding this information.

Sincerely,
K. SINGH & ASSOCIATES, INC.

Passive Air Sampling Test Results

Analytical Report

3/16/2023

Mr. Robert Reineke
K Singh & Associates
3636 N 124th St

Wauwatosa WI 53222

Project Name: CWC EB
Project #: 40441
Workorder #: 2303074B

Dear Mr. Robert Reineke

The following report includes the data for the above referenced project for sample(s) received on 3/3/2023 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Passive S.E. RAD130/SKC are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Jade White at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

Jade White
Project Manager

**LABORATORY NARRATIVE
RAD130 Passive SE by Mod EPA TO-17
K Singh & Associates
Workorder# 2303074B**

Forty-one Radiello 130 (Solvent) samples were received on March 03, 2023. The laboratory analyzed the charcoal sorbent bed of the passive sampler following modified method EPA TO-17. The VOCs were chemically extracted using carbon disulfide and an aliquot of the extract was injected into a GC/MS for identification and quantification of volatile organic compounds (VOCs).

The mass of each target compound adsorbed by the sampler was converted to units of concentration using the sample deployment time and the sampling rate for each VOC. If sampling rates were calculated by the lab or the manufacturer, the concentration result has been flagged as an estimated value. Results are not corrected for desorption efficiency.

The reference method used for this procedure is EPA TO-17, which describes the collection of VOCs in ambient air using sorbents and analysis by GC/MS. Because TO-17 describes active sample collection using a pump and thermal desorption as the preparation step, several modifications are required. Modifications to TO-17 are listed in the table below:

Requirement	TO-17	ATL Modifications
Sample Collection	Pump pulls measured air volume through sorbent tube	VOCs in air adsorbed onto sorbent bed passively through diffusion
Sample Preparation	Thermal extraction	Solvent extraction
Sorbent tube conditioning	Condition newly packed tubes prior to use	Charcoal-based sorbent is a single use media and conditioning is conducted by vendor.
Instrumentation	Thermal desorption introduction system	Liquid injection introduction system
Internal Standard	Gas-phase internal standard introduced on the tube or focusing trap during analysis	Liquid-phase internal standard introduced on the tube at the time of extraction
Media and sample storage	<4 deg C, 30 days	Media shelf life is determined by vendor; sample hold-time is 6 months for the RAD130 and WMS. Sample preservation requirements are storage in a cool, solvent-free refrigerator and optional use of ice during shipping.
Internal Standard Recovery	+/-40% of daily CCV area	-50% to +100% of daily CCV area

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

The uptake rates were corrected based on average field temperatures if provided. In the absence of field temperatures, the uptake rates determined at 25 deg C were used.

If validated uptake rates were not available, rates were estimated using the chemical's diffusion coefficient in air and the geometric constant of the sampler. Chemicals that are poorly retained by the sorbent over the sampling duration may exhibit a low bias. All concentrations calculated using estimated rates are qualified with a "C" flag.

To calculate ug/m³ concentrations in the Lab Blanks, a sampling duration of 12885 minutes was applied. The assumed temperature used for the uptake rate is listed on the data page. If the field temperatures were provided, the rate was adjusted in the same manner as the field samples.

Definition of Data Qualifying Flags

Ten qualifiers may have been used on the data analysis sheets and indicate as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit.

UJ- Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

C - Estimated concentration due to calculated sampling rate

CN - See case narrative explanation.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

"J" Flag: Analyte detected between LOD and LOQ

LOD Limit of Detection

LOQ Limit of Quantitation

Code Comment

1 Laboratory QC within limits.

All solid sample results reported on a dry weight basis unless otherwise indicated. All LOD's and LOQ's are adjusted for dilutions but not dry weight. Subcontracted results are denoted by SUB in the analyst field.

Project Name CWC WEST BLOCK

Invoice # E42179

Project # 40441

Lab Code 5042179B

Sample ID EB-EF-S

Sample Matrix Air

Sample Date 3/16/2023

"J" Flag: Analyte detected between LOD and LOQ

LOD Limit of Detection

LOQ Limit of Quantitation

Code Comment

1 Laboratory QC within limits.

All solid sample results reported on a dry weight basis unless otherwise indicated. All LOD's and LOQ's are adjusted for dilutions but not dry weight. Subcontracted results are denoted by SUB in the analyst field.

Authorized Signature
